SUMMARY

Product Designer with 5+ years of experience shipping B2B SaaS and enterprise workflows for 2M+ users. Specializes in 0-to-1 product design, AI-first workflows, and design systems (token architecture, component libraries). Currently targeting Senior Product Designer, Lead Product Designer, or Founding Designer roles in AI/ML, SaaS, Fintech, and HR Tech.

WORK EXPERIENCE

Product Design Lead, Triibe - Remote

March 2026 - Present

- Own the full design function across product, brand, and web as the most senior designer in a 3-person team within a 70-person organization
- Directed an AI-assisted build of the 2026 Wren Gala site (St James Church, Piccadilly, NYC) as sole designer, developer, and product owner, shipping in about 2 weeks with zero hand-written code after evaluating three AI tools
- Designed and built the Triibe100 honoree page (triibe.org/100) using Claude Code and VS Code, extending Triibe's branches motif into matching social announcement cards

UX Designer, ZingHR - Mumbai, India

Jan 2020 - Aug 2023

- Optimized the Employee Dossier module by consolidating key employee information into a clearer structure, improving UX for 2M+ active users and reducing data retrieval time by 15%
- Designed ZingHR's Rewards and Recognition module from scratch, covering 6 award types, 5 user roles, and a group-based permission system scaled for enterprise B2B customers
- Led 0-to-1 design for the MyRCloud recruiting platform, conducting user research with 600+ recruiting partners, mapping customer journeys, and enabling closure of 3,000+ positions
- Audited the product UI, built the case for a design system, and shipped a 20 to 50 component library in Figma with a token architecture adopted directly into engineering's codebase

PROJECTS

Wren Gala - AI-Assisted Website Build (St James Church, Piccadilly, NYC)

2026

- Evaluated three AI-assisted workflows (Figma Make, Lovable, Claude + VS Code) before choosing Claude + VS Code for full creative control and zero hand-written code
- Evaluated payment platforms (Rayze, Givebutter, ACH + Airtable) and pivoted to Stripe specifically to avoid data-handling and legal exposure
- Built a multi-page site (homepage, honoree cohort page, church history narrative, Stripe-powered ticket purchase flow) with automated booking confirmation emails, live at wrengala.org

UrbanPark - Peer-to-Peer Parking Marketplace (Figma prototype)

MS Thesis, Jan - Dec 2025

- Conducted 15+ qualitative interviews (from about 150 homeowners contacted), synthesizing 250+ minutes of feedback to design both sides of the marketplace end-to-end, fully mobile
- Designed "UPark Assist," an in-app conversational AI flow for overstay and occupancy verification via a connected home security camera, with fallback states, confidence-threshold logic, manual dispute and override, and trust-aware error messaging
- Built a full design system from scratch: 95 color primitive tokens across 9 ramps, 29 semantic tokens, 2 type families with 3 weights, plus a documented component library including a 3-tier verification badge system

GenAI Adoption Research, Academic / Pharmacy Context

Jan - May 2024

- Defined the research plan and interview guide, then led interviews investigating GenAI adoption blockers among pharmacy graduate students, converting trust concerns (accuracy, privacy, plagiarism) into UX requirements and guardrails

EDUCATION

MS, User Experience and Interaction Design - Thomas Jefferson University, Philadelphia (2025)

SKILLS

Product Design: End-to-end workflow design, information architecture, prototyping, usability testing, accessibility (WCAG), 0-to-1 product design, stakeholder alignment

AI and Conversation Design: AI interaction design, conversation flow design, fallback and error state design, confidence-threshold handling, AI-assisted design workflows, multimodal design

Design Systems: Token architecture, component library design (Figma), engineering handoff specs, documentation, cross-team rollout

Research: Qualitative interviews, synthesis, journey mapping, user flows, heuristic evaluation, scenario-based usability testing, MVP scoping

Tools: Figma, Figma Make, Miro, Jira, Webflow, Adobe CC, Cursor, GitHub, Lovable, Claude, Claude Code, VS Code, Vercel, HTML, CSS
